Understanding your business stakeholders is key to survival in an agile market. Relationship based marketing is becoming ever more important than before. It is important that your business acquires new customers while retaining their existing ones. **The buyers power is becoming ever greater.**

ETAPIX can help in making sure that your clients have access to the right information at the right time. We can help you build a stronger relationship with your clients and partners, and help you build a stronger company brand. Technology is forever moving and powering people with new means.

**Do you know your current technological presence? Do you provide mobile-based services to your clients allowing them to share their knowledge and experience easily with others? What are the means available for your clients to recommend your services or products?**

## flexible solutions for your business needs

ETAPIX PROVIDES A TRUE 360° END-TO-END BUSINESS SOLUTION

### IT CONSULTING

There are many confusion and promises about what technology can do for your business. It is true that technology can help reduce cost and increase market penetration, but this idiom is not a guarantee. Not all technologies are the same nor do they provide the same benefits. Businesses should not be a test-bed for technology companies.

ETAPIX is an independent company that thrives in providing best of breed solutions to small businesses. We listen to businesses and identify areas that will benefit from technology. We do not work with any technology vendors and therefore, we are in a position to provide you with an independent analysis of their solutions. This is how we work:

- We work with businesses to understand their real requirements.
- We evaluate IT solutions and present them with their pros/ cons.
- We build a project team to implement the preferred solution.
- We provide on-going support well after project completion

## IT Infrastructure Management

ETAPIX provides round the clock support for your IT investments. From our offices in London, we support a wide range of applications including: Microsoft, IBM, Sun, Oracle, SAP, Symantec and Open Source software.

## System Integration

ETAPIX provides solutions for integrating your mission critical data running on legacy systems with your new IT investments. Legacy does not have to mean “isolated and old” as we can open your data to new services.

## Web 2.0—Enterprise 2.0 Solutions

How does information flow in your organization? Employees need to have the ability to share and collaborate in real-time without duplicating efforts. Customers need to be able to find information about your products and services without the need for a helpdesk. Are you Enterprise 2.0 ready?

## ENTERPRISE SEARCH TECHNOLOGY

Your business is growing and producing more information than ever, but is that knowledge readily available when you need it? Business information can be scattered through different departments which do not work together, creating a barrier to the company knowledge flow. ETAPIX can provide a solution to this problem through Enterprise Search and Knowledge Discovery.

## Software Development

Software development is the black art of technology. While many businesses do not understand it, software development is the nervous system of all technology solutions. Software development is the process of turning your visions and requirements into a computer application to help your business become more competitive. For example, your business will require a software solution to be built which tailored to your requirements, allowing you to reach your mobile based customers or compile automated market research data. ETAPIX provides the following:

- Enterprise application development ( such as inventory management, employee payroll and customer relationship management).
- Enterprise portal development; local web applications connecting clients, partners, suppliers and employees to your business.
- Mobile application development; applications which run on mobile phones, Televisions and portable devices.
- Database development.
- Custom software development.
